
THE BEGINNING

Module 12

AI in Slicing & Print Optimization — Tier 3: Advanced

1. Where AI Fits in Slicing

- Auto-generating optimized support placement
- Predicting and flagging likely failure points before printing
- Suggesting settings profiles based on model geometry and material

2. Benefits vs. Limitations

- **Benefit:** saves time for beginners who don't yet know optimal settings
- **Limitation:** AI suggestions still need human review — every printer/filament combo is different

3. Practical Use

Use AI-suggested settings as a starting profile, then apply what you learned in Module 10 (calibration) to fine-tune for your specific machine.

End of Module 12 — Next: Module 13, Functional & Mechanical Design
